Art Unit: 1775

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 9,10, 12, 19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 9 and 19, it is unclear where this layer is now positioned, rendering the claims indefinite.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1-7, 9-22 are rejected under 35 U.S.C. 102(e) as being anticipated by Beale (6,127,048) or Hasz et al (5,914,189 or 5,773,141).

Art Unit: 1775

Beale and Hasz et al discloses the claimed products having a spinel layer attached to the claimed substrate through a bond coat. The claimed thermal expansion coefficient is considered inherent. Although the references explicitly discloses as an *example* of a spinel being magnesium aluminum oxide, the references are not limited to only that spinel.

5. Claims 1-7, 9-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Siemens (WO 96/34128) or Toyota Motor Corp (JP 63-274751).

The references discloses the claimed products having a spinel layer attached to the claimed substrate through a bond coat. The claimed thermal expansion coefficient is considered inherent. Although Siemens explicitly discloses a spinel being zirconium aluminum oxide, the reference teaches spinels broadly and thus includes those claimed. Similarly, Toyota Motor Corp teaches spinels broadly.

6. Claims 1,2, 5-7, 9-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Druchitz et al (5,037,070).

Druchitz et al disclose the claimed products having a spinel layer attached to the claimed substrate through a bond coat. The claimed thermal expansion coefficient is considered inherent. Druschitz et al clearly discloses the spinel disclosed in claim 2.

Art Unit: 1775

7. Claims 1, 3-5, 16-19 are rejected under 35 U.S.C. 102(b) as being anticipated by United Technologies Corp (EP 185605).

United Technologies Corp discloses the claimed products having a magnesium aluminum oxide spinel layer attached to the claimed substrate through a bond coat.
